For use with adrenaline (epinephrine) autoinjectors - refer to the device label for instructions
Instructions are also on the ASCIA website www.allergy.org.au/anaphylaxis

SIGNS OF MILD TO MODERATE ALLERGIC REACTION

- Swelling of lips, face, eyes
- Hives or welts
- Tingling mouth
- Abdominal pain, vomiting

(These are signs of anaphylaxis for insect allergy)

ACTION FOR MILD TO MODERATE ALLERGIC REACTION

- For insect allergy - flick out sting if visible
- For tick allergy seek medical help or freeze tick and let it drop off
- Stay with person and call for help
- Locate adrenaline autoinjector
- Phone family/emergency contact

Mild to moderate allergic reactions (such as hives or swelling) may not always occur before anaphylaxis

WATCH FOR ANY ONE OF THE FOLLOWING SIGNS OF ANAPHYLAXIS (SEVERE ALLERGIC REACTION)

- Difficult/noisy breathing
- Swelling of tongue
- Swelling/tightness in throat
- Wheeze or persistent cough
- Difficulty talking and/or hoarse voice
- Persistent dizziness or collapse
- Pale and floppy (young children)

ACTION FOR ANAPHYLAXIS

1 Lay person flat - do NOT allow them to stand or walk
   - If unconscious, place in recovery position
   - If breathing is difficult allow them to sit
2 Give adrenaline autoinjector
3 Phone ambulance - 000 (AU) or 111 (NZ)
4 Phone family/emergency contact
5 Further adrenaline doses may be given if no response after 5 minutes
6 Transfer person to hospital for at least 4 hours of observation
If in doubt give adrenaline autoinjector
Commence CPR at any time if person is unresponsive and not breathing normally

ALWAYS give adrenaline autoinjector FIRST, and then asthma reliever puffer
if someone with known asthma and allergy to food, insects or medication has SUDDEN BREATHING DIFFICULTY (including wheeze, persistent cough or hoarse voice) even if there are no skin symptoms

- If adrenaline is accidentally injected (e.g. into a thumb) phone your local poisons information centre.
- Continue to follow this action plan for the person with the allergic reaction.
